

Junior Account Clerk
Junior Stenographer
Hospital Attendant
Fireman
Dining Room Supervisor
Night Supervisor
Two Cottage Masters
Music Teacher
Two additional Elementary Teachers
Vocational Instructor in Mechanics
Vocational Instructor in Carpentry

In the appropriation for expenses it is necessary to allow an increased amount for food, in order that a more adequate and balanced diet can be provided; an additional sum for fuel, because of the new buildings to be constructed; an increased amount for vocational and educational supplies and equipment. As the buildings are in need of repairs, funds have been provided for that purpose as well.

With the increased appropriations being recommended, I feel that the institution's physical plant will be put in good condition and necessary training facilities provided for the boys. The population in the institution is 420, and the per capita cost for 1942-1943 will be \$335.00.

STATE DEPARTMENT OF HEALTH

The increase to this Department is \$21,230.00, all of which is for new activities as set forth in the budget detail. These activities comprise provision for:

1. An additional chemist in the central laboratory. This chemist is necessary not only because of the increase in the regular work in the examination of foods and drugs, but also to assist in the examination of specimens from persons suspected of having become ill because of their employment. An important part of this new activity will be the examination of the blood of workers to determine lead content in cases of illness suspected to be lead poisoning.

2. A chemist and a technician at a branch chemical laboratory to be established on the Eastern Shore. Because of the increase in work, the necessity for following the latest methods of analysis, and to make the results more promptly available to the industries concerned, it is planned to establish a branch chemical laboratory on the Eastern Shore. This will avoid the necessity of long trips of the specimens from the point of taking to the central laboratory in Baltimore, as well as waste of money. Under such conditions, not infrequently samples spoil and are not in proper shape for examination. Lack of this facility has been a real handicap in examining specimens of foods from the Eastern Shore of the State.

3. Two additional stenographers in the Bureau of Communicable Diseases, who are needed in order to assist in the statistical study of tuberculosis and the venereal diseases.

4. Two additional clerks in the Bureau of Vital Statistics who are needed principally for the purpose of assisting the public in filing certificates of delayed registration. Proof of citizenship is now required for workers in many
