

TRUSS AND SUPPORTERS.

TRUSS AND SUPPORTERS.

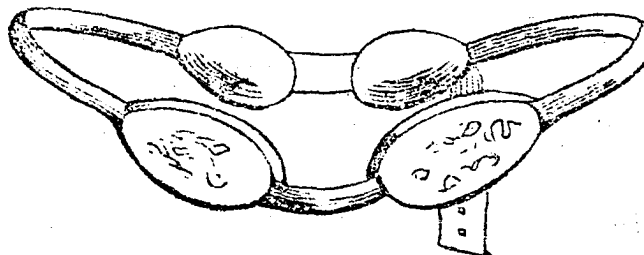

DR. ANDREW DUNN,
No. 3 WEST FAYETTE STREET,

UNDER THE RECHABITE HALL,

Respectfully informs the citizens of Baltimore, that he is prepared to treat all Hernial difficulties and particularly the diseases to which women are exposed. His arrangements with Mr. SANDERSON, the Proprietor of Dr. HOOD'S TRUSS, as improved, and Dr. HOOD'S SUPPORTER, the most simple and effective Instrument in use enables him to meet the several difficulties with full confidence of success. The Truss

Which differs from all other instruments of the kind, is a simple adaptation of the lever to the shape of the body, and to the indications of the disease. Its action from the centre towards the sides, meets the descending bowel and by compressing the whole of the canal, closes it and the internal opening against further protrusion. The SUPPORTER

Which acts upon the same principle of leverage, and by avoiding the *rectus abdominus* and the several organs immediately located behind it, the pressure is thrown where the support is wanted, and of course the viscera prevented from encroaching upon the organs of the Pelvis. This action which is peculiar, and alone obtained from this instrument, removes one of the principle and most irritating causes of the disease, and by holding the viscera of the abdomen within the cavity, enables them to perform their several functions, and of course the action of the remedies employed in the treatment.

DR. A. DUNN,
No. 3 RECHABITE HALL, WEST FAYETTE STREET.
